PROFILE

Computer Science graduate with a full-stack development background, now focused on Data Engineering through hands-on projects in Python, SQL, data pipelines, and relational databases.

EDUCATION

Vellore Institute of Technology
B.Tech in Computer Science and Engineering

CGPA: 7.6/10
Oct 2022 – June 2026

TECHNICAL SKILLS

- **Languages:** Python, SQL, Java, JavaScript
- **Data Engineering:** ETL/ELT, Data Pipelines, Data Ingestion, Batch Processing, Data Cleaning, Data Validation, Data Transformation, Data Quality, Data Modeling
- **Data Tools:** Pandas, NumPy, Requests, REST APIs, JSON, CSV, Shell Scripting
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB
- **Tools:** Git, GitHub, Linux, Docker, AWS
- **Foundations:** DBMS, Data Structures and Algorithms, Object-Oriented Programming, Computer Networks, Operating Systems

PROJECTS

- TransitFlow | Python, SQL, PostgreSQL, GTFS, GTFS-Realtime** 2026
- Built the ingestion and raw-data layer of a batch and real-time transit platform using BART GTFS schedules and GTFS-Realtime feeds; staging and analytics layers are in active development.
 - Implemented Python ingestion to land static and real-time feeds, with staging designed around cleaned, typed, deduplicated, and validated data.
 - Designed a star schema with `fct_trip_updates` and station, route, and calendar dimensions for analytics-ready SQL workloads.
 - Designed reconciliation for BART trip IDs that differ between static and real-time feeds, including explicit handling for missing Oakland Airport Connector real-time arrival data.
- Weather Data Pipeline | Python, Pandas, SQL, SQLite, REST API** 2026
- Built a batch pipeline for 3 cities that extracts Open-Meteo data and moves each observation through raw JSON, processed JSON, CSV history, and a multi-city SQLite database.
 - Enforced `UNIQUE(city, observation_time)` in SQLite and used `INSERT OR REPLACE` to prevent duplicate observations for the same city and timestamp.
 - Added 3 automated tests covering processed-field validation, JSON output, and multi-city database storage, with a 10-second API timeout and explicit network/API error handling.
- mini-git | Python, SHA-1, Data Structures, File Systems** 2026
- Implemented Git-style content-addressable storage where file contents are stored and referenced using SHA-1 hashes.
 - Built blob, tree, commit, and staging-area objects, with commits linked through parent pointers to support history traversal.
 - Implemented branches, checkout, commit log, and line-based diff using filesystem operations and commit/tree relationships.

EXPERIENCE

- Software Trainee – IT Department** **HaleForm Technology Solutions Pvt. Ltd.**
Hybrid Jun 2025 – Sep 2025
- Developed and integrated REST APIs using Node.js and Express.js, working with application data and connecting frontend features with backend services.
 - Worked with MongoDB for application data storage, implementing CRUD operations and handling data retrieval and updates for internal applications.
 - Used Git, GitHub, and CI/CD workflows for feature development, debugging, code changes, and maintaining application releases.
 - Built and updated React.js interfaces using JavaScript and Tailwind CSS, collaborating across frontend and backend components during development.

LEADERSHIP AND ACTIVITIES

- Creative Co-Lead, Cisco Community VITB** **Oct 2023 – Mar 2024**
Vellore Institute of Technology
- Led creative planning and execution for events involving 40+ community members.
 - Coordinated timelines, design deliverables, and team contributions to support event visibility and engagement. “
